

# 70-volt Speaker Wiring Limitations Chart

**Instructions:** Determine the combined output in watts for all speakers on a line. Find that value at the bottom of the chart. Follow the nearest vertical line up to its intersection with a diagonal wire size line. Follow the horizontal line nearest the intersection to the left side of chart. Read the maximum length in feet from the feet line.

**Add the Total Watts of All Speakers on a Wire Run.**

*Use shielded wire on all 70-volt speaker runs.*
